Groen Batch Processing Kettles...Available With Hot Oil or Hot Water Heating

Groen hemispherical bottom agitator kettles can be ordered for use with hot oil or hot water, in addition to traditional steam heating and cold water cooling.

These alternative heating methods can broaden the processing temperature range of traditional jacketed kettles and are ideal for many specialized product applications.

Groen Premier Line and Elite Line Kettles can be equipped with self-contained electric Hot Oil Heating Systems capable of providing kettle jacket temperatures in excess of 500 degrees F. These systems are ideal for products that require higher processing temperatures than available from 125 PSI steam.

Groen Premier Line and Elite Line Kettles can also be equipped with a self-contained electric Hot Water Heating System designed to limit processing temperatures of 200 degrees F or less with precise temperature control.

Groen kettles are available in a wide range of sizes and agitator configurations, designed to meet your mixing/blending needs and can be designed for atmospheric, pressure or vacuum processing applications.

Please contact us via our web site which is www.gpeequipment.com or by calling us at (847) 462-1865.
